

ESKI PALAI

SDET | QA Automation & AI Testing Engineer | Inceptive Technologies | Pune, Maharashtra

+91 9348694971 | eskipalai@outlook.com | [linkedin.com/in/eski-palai](https://www.linkedin.com/in/eski-palai)

SDET | AI Testing Engineer | Selenium | Playwright | Python Automation | API & Microservices Testing | LLM | RAG | Prompt Testing | Jenkins CI/CD

PROFILE SUMMARY

Results-driven SDET and QA Automation Engineer with 3.5+ years of hands-on experience delivering robust test automation solutions across Telecom and Banking enterprise applications. Proficient in designing scalable frameworks using Selenium, Playwright, and Python, with deep expertise in REST API testing via Postman and Python Requests. Demonstrated success in AI and LLM testing — including RAG pipeline validation, NLP chatbot evaluation, prompt engineering, and hallucination detection — achieving up to 45% reduction in regression effort. Well-versed in testing microservices architectures, API gateways, and end-to-end workflows across OSS, BSS, and core banking systems. Strong command of CI/CD integration with Jenkins and GitHub Actions, Agile/Scrum delivery, and cross-functional collaboration to ship high-quality, reliable software at speed.

CORE SKILLS

Programming & Scripting	Python, JavaScript, SQL
UI Automation	Selenium WebDriver, Playwright, Page Object Model (POM), Data-Driven Testing
API Testing	Postman, REST API, Python Requests, OpenAPI / Swagger, Payload & Auth Validation
Test Framework	Pytest — CLI, Fixtures, Parametrization, Markers, Config Files
CI/CD & DevOps	Jenkins, Git, GitHub, GitHub Actions, Jenkins Pipeline, Docker Compose
AI / LLM Testing	Promptfoo, DeepEval, LangSmith, RAGAS, TruLens
Testing Types	Functional, Regression, Integration, System, UAT, Cross-Browser, Performance (Basic)
Test Management	Jira, Zephyr, Confluence, Agile / Scrum
Data & Database	JSON, CSV, Excel, SQL
Reporting	Allure Report, HTML Report
IDE & Tools	VS Code, PyCharm, Playwright Inspector, GitHub Copilot, ChatGPT
Domain Expertise	Telecom (OSS / BSS / CRM), Banking (Loan Lifecycle)

TECHNICAL SKILLS

WORK HISTORY

QA Automation Engineer | Inceptive Technologies | Pune, Maharashtra Oct 2022 – Present
Delivered end-to-end QA across Telecom and Banking enterprise platforms, including automation framework design, AI/LLM validation, API testing, and CI/CD-integrated regression pipelines.

PROFESSIONAL EXPERIENCE

- ▶ **Engagement Scope:** 3.5+ years as SDET across QA Automation, Functional Testing, API Testing, UI Testing, and AI Application Testing in Telecom and Banking domains.
- ▶ **Testing Split:** 30% AI Testing (Gen AI / Agentic AI) + 70% UI & API Automation Testing.
- ▶ **Core Stack:** Playwright, Selenium, Pytest, Python Requests, Postman, REST APIs, SQL, and JSON Schema Validation.
- ▶ Validated LLM responses, RAG pipelines, prompt outputs, hallucination patterns, grounding accuracy, and contextual relevance across Telecom and Banking chatbot systems.
- ▶ Executed structured prompt testing using Promptfoo, DeepEval, RAGAS, and LangSmith to evaluate model reliability and output consistency.
- ▶ Tested Agentic AI workflows end-to-end, covering intent detection, tool calling, memory management, fallback logic, and human escalation scenarios.
- ▶ Engineered scalable UI automation using Playwright and Selenium with Page Object Model (POM), reusable locators, dynamic assertions, and synchronization strategies — reducing manual regression effort by ~40%.
- ▶ Automated API workflows using Python Requests, Pytest, Postman, and Swagger with full JSON schema validation and error-path coverage.
- ▶ Built modular Pytest frameworks with fixtures, markers, parametrization, configuration management, and Allure/HTML reporting for clear defect traceability.
- ▶ Validated authentication and authorization mechanisms including JWT, Bearer Token, OAuth 2.0, and Role-Based Access Control (RBAC) to ensure API security compliance.
- ▶ Conducted SQL-based backend validation for data integrity, API-to-database consistency, and regression coverage across critical data stores.
- ▶ Telecom Domain: Tested CRM, BSS, and OSS systems — service activation, billing, recharge, plan recommendation, complaint management, and ticketing — with full UI, API, and backend validation.
- ▶ Banking Domain: Tested loan origination flows — eligibility checks, credit score validation, document upload, approval lifecycle, and disbursement — with secure API and data integrity validation.
- ▶ CI/CD: Integrated automated test suites into Jenkins and GitHub Actions pipelines, enabling scheduled regression and faster feedback loops across sprint cycles.
- ▶ AWS: Leveraged EC2 (test execution environments), S3 (file/document validation), RDS (database testing), and AWS Bedrock (AI testing support) in cloud-based QA workflows.

PROJECTS

PROJECT 1 — Enterprise Telecom Service Desk AI Agent

Client	EU Telecom Client (BT/EE-type)
Region	UK / Europe
AI Assistant	Gen AI-powered Service Desk Assistant
Tech Stack	Playwright, Selenium, Python, Pytest, Postman, AWS Bedrock, LangSmith
Application	Enterprise Support System + Agentic AI + Ticketing Platform
Testing Type	Agentic AI Testing, Functional, API Testing

Gen AI-powered enterprise service desk enabling business customers to raise and manage telecom requests (broadband, leased line, VPN, voice) via an Agentic AI system for automated issue classification, ticket creation, and SLA-driven escalation.

QA Responsibilities

- ▶ Designed and executed end-to-end test scenarios covering ticket creation, intelligent classification, routing logic, and escalation workflows.
- ▶ Validated the full Agentic AI flow: user intent detection → tool invocation → API execution → response generation → ticket confirmation.
- ▶ Performed API validation for CRM lookup, ticketing, service status, and SLA rule enforcement endpoints using Postman and Python Requests.
- ▶ Automated agent portal, chatbot interface, and operations dashboard using Playwright with POM and assertion strategies.
- ▶ Automated API test suites using Python Requests + Pytest + Postman with JSON schema validation and negative-path coverage.
- ▶ Tested fallback and degraded-mode scenarios — API failure, ambiguous user input, and low-confidence AI response handling.
- ▶ Leveraged LangSmith traces to debug agent decision chains and validate tool execution sequences.
- ▶ Validated SLA prioritization rules, customer tier mapping, and service categorization accuracy to ensure business logic compliance.

PROJECT 2 — Telecom Recharge & Payment Gateway Platform

Client	US Telecom Client
Region	USA
Application	RechargeBot — Recharge & Payment Assistant
Tech Stack	Playwright, Python, Pytest, Postman, SQL, Jenkins, Docker
System Type	Recharge, Payment & Wallet Management System
Testing Type	Functional Testing, API Testing, Payment Validation

Enterprise telecom payment platform supporting prepaid/postpaid mobile recharge, broadband billing, wallet top-ups, and UPI/card payments — with coupon handling, refund processing, and full transaction lifecycle management.

QA Responsibilities

- ▶ Validated recharge and payment workflows across prepaid, postpaid, broadband, add-on, and roaming plans.
- ▶ Tested critical payment scenarios: success, failure, timeout, refund, duplicate transaction, and cancellation edge cases.
- ▶ Automated UI workflows using Playwright — plan selection, checkout, payment execution, and transaction history review.
- ▶ Built automated API test suites using Python Requests + Postman for recharge initiation, payment processing, and refund endpoints.
- ▶ Validated transaction data integrity — amounts, taxes, discounts, coupon application, and confirmation records — using SQL and API assertions.
- ▶ Executed SQL database validation across payment, recharge, wallet, coupon, and subscription tables for backend consistency.
- ▶ Tested adverse scenarios — invalid card details, insufficient balance, expired coupons, and gateway timeout handling.
- ▶ Deployed and executed regression suites in Dockerized environments via Jenkins CI/CD pipelines, reducing release cycle time by ~25%.

PROJECT 3 — Loan Origination & Approval System

Client	US Banking Client
Region	USA
Chatbot	LoanAssist Bot
Testing Split	70% Manual Testing + 30% Automation Testing

Tech Stack	Playwright, Python, Pytest, Postman, SQL, Jenkins, Allure
-------------------	---

Full loan lifecycle management platform covering application submission, eligibility checking, document upload, credit score verification, approval/rejection workflows, EMI calculation, and disbursement processing for personal, home, and vehicle loans.

Manual Testing (70%)

- ▶ Designed and executed test cases covering end-to-end loan flows for personal, home, and vehicle loan products.
- ▶ Verified eligibility business rules — income thresholds, credit score bands, age limits, employment type, and loan amount caps.
- ▶ Tested document upload module for salary slips, bank statements, ID proofs, and address proofs — including format and size validation.
- ▶ Validated loan status transitions: Submitted → Under Review → Approved / Rejected → Disbursed with full state-machine coverage.
- ▶ Executed negative test scenarios — low credit score, missing documents, duplicate applications, and invalid income entries.
- ▶ Verified EMI calculation accuracy, interest rate logic, tenure options, processing fees, and repayment schedule generation.
- ▶ Reported and tracked defects across incorrect EMI output, eligibility mismatch, upload failures, and status discrepancies.

Automation Testing (30%)

- ▶ Automated loan application submission and end-to-end flow validation using Playwright + Python with POM.
- ▶ Automated eligibility check API validation using Python Requests and Pytest with parametrized test data.
- ▶ Validated document upload API — file-type restrictions, size limits, and response assertion coverage.
- ▶ Automated loan status tracking and verified state transitions via API assertions and database queries.
- ▶ Used SQL to validate loan records, credit scores, and disbursement data against backend database state.
- ▶ Integrated automated test suites into Jenkins CI/CD pipeline for scheduled regression execution across environments.
- ▶ Generated Allure reports with execution results, coverage metrics, and defect traceability dashboards.

ADDITIONAL CONTRIBUTIONS

-
- ▶ Executed functional, regression, integration, and negative testing across Telecom and Banking enterprise applications throughout the SDLC.
 - ▶ Designed AI-specific test cases incorporating multilingual inputs, ambiguous queries, adversarial prompts, edge cases, and failure scenarios for LLM and chatbot systems.
 - ▶ Conducted structured LLM output validation for accuracy, consistency, hallucination rate, and contextual relevance across Telecom and Banking chatbot systems.
 - ▶ Performed ethical AI testing including bias detection, fairness validation, and Responsible AI compliance checks for customer-facing Telecom and Banking AI workflows.
 - ▶ Leveraged AI-assisted testing tools (mabl, Testim) for intelligent test generation, exploratory coverage, and defect pattern analysis across enterprise applications.
 - ▶ Ensured AI chatbot compliance with data privacy, security, and explainability requirements in regulated Telecom and Banking domains.

ACADEMIC DETAILS

Master of Computer Applications (MCA)	2025
College of Engineering Bhubaneswar (COEB)	
Bachelor of Science (Computer Science)	2020
Paradeep Degree College, Paradeep
